Group No: 10

Project Report On

Project name [G-Shop Management system *]*

Supervised By

Md. Hasibul Hasan

Submitted By:

Name	ID
ABDUR ROB RAFI	23-5549-33
YASIR ARAFAT	23-55352-3
AFNAN SULTAN TRINO	23-55524-3

Obtained Marks for CO2 and CO3 (Description given in the following page)

Assessment Criteria	Not Attended/ Incorrect (0)	Inadequate (1-2)	Average (3)	Good (4)	Excellent (5)

Evaluation Criteria (CO2)	Total =	Evaluation Criteria (CO3)	Total =
Requirement fulfillment		Organization of the application	
Validation		Representation and Integration of Database	
Verification		Graphical User Interface	

CO2: Display and verify the mean of a real-life Project using the concepts of C# Graphical User Interface based environment with database integration to depict a desktop-based application.					
Assessment Criteria	**Not Attended/ Incorrect (0)**	**Inadequate (1-2)**	**Average (3)**	**Good (4)**	**Excellent (5)**
Evaluation Criteria	**Evaluation Definition**				
Requirement fulfillment	Fails to demonstrate any understanding of real-life scenario-based project development or functional requirement identification. There is no attempt to depict a project or identify functional requirements accurately.	Demonstrates limited understanding of real-life scenario-based project development and functional requirement identification. The project depicted lacks coherence or relevance to real-life scenarios, and functional requirements are inaccurately identified or insufficiently described.	Presents a basic depiction of a real-life scenario-based project and identifies some functional requirements. However, the project lacks depth or complexity, and some functional requirements may be vaguely defined or missing key details.	Effectively demonstrates a realistic scenario-based project and accurately identifies most functional requirements. The project is well-developed with appropriate complexity, and functional requirements are clearly articulated with relevant details.	Exhibits an exceptional understanding of real-life scenario-based project development and accurately identifies all functional requirements. The project is meticulously developed with thorough attention to detail, reflecting a comprehensive understanding of Object-Oriented Programming project development activities.
Validation	Fails to demonstrate any understanding or implementation of validation forms in their system. There is no attempt to deal with data validation, and validation requirements are completely	Demonstrates limited understanding of validation forms and data validation techniques. While some attempt may be made to implement validation, it is incomplete or poorly executed, leading to	Shows a basic understanding of validation forms and data validation techniques. They attempt to implement validation, but some aspects may be missing or incorrectly implemented, resulting	Effectively demonstrates the use of validation forms and implements data validation techniques. Validation is mostly accurate and comprehensive, ensuring the proper handling of data input and verification	Exhibits an exceptional understanding and implementation of validation forms and data validation techniques. Validation is meticulously implemented with thorough attention to detail, ensuring robust data

	ignored or incorrectly applied.	inadequate handling of data validation.	in partial or inconsistent handling of data validation.	in the system.	validation procedures and contributing to the overall reliability and integrity of the system.
Verification	Fails to demonstrate any attempt to verify the system data or functional requirements. There is no evidence of understanding or implementation of verification processes, and data flow is not considered.	Demonstrates limited understanding of verification processes and data flow in the system. Verification attempts are incomplete or inaccurate, and there is insufficient consideration given to ensuring data integrity and functionality.	Shows a basic understanding of verification processes and attempts to verify system data. However, verification efforts may be inconsistent or lack thoroughness, and there may be gaps in ensuring proper functional requirements and data flow.	Identifies and verifies system data, ensuring proper functional requirements are met. Verification efforts are mostly accurate and thorough, with attention to ensuring data integrity and appropriate data flow within the system.	Exhibits an exceptional understanding of verification processes and meticulously verifies system data. Verification efforts are comprehensive and precise, with a keen focus on ensuring all functional requirements are met and maintaining proper data flow throughout the system.

CO3: Prepare and Explain a real life desktop based application synthesizing several component of C# along with development tools to adhere the given requirements.					
Assessment Criteria	**Not Attended/ Incorrect (0)**	**Inadequate (1-2)**	**Average (3)**	**Good (4)**	**Excellent (5)**
Evaluation Criteria	**Evaluation Definition**				
Organization of the application	Fails to identify any suitable real time application or requirements for project development activities related to OOP.	Limited understanding about the project scopes and scenarios or identification of functional requirements.	Lacks depth or relevance to OOP project development activities and may contain inaccuracies. Real-life scenarios are mentioned, but the discussion lacks depth or clarity.	Consider and integrate the idea of several core aspects of the project along with relevance to real-life scenarios. Demonstrating a solid understanding of the application presentation.	Generalize and exhibits an exceptional understanding of project preparation according to a to real-life scenarios. Also contains proper and insightful identification of the system which is comprehensive and precise.
Representation and Integration of Database	Fails to identify and present any understanding or implementation of database. Also failed to integrate the data with the project itself.	Limited understanding of the database concepts or their proper way of using in a real time project. While some attempt may be made to implement but it is incomplete or poorly executed, leading to inadequate design.	Lacks depth or relevance to database integration with the application. Shows a basic understanding but some aspects may be missing or incorrectly implemented, resulting in partial or inconsistency. May lack proper normalization.	Integrate the database with the forms properly and implements it with proper validation which is mostly accurate and comprehensive, ensuring the proper handling of data input and verification along with general normalization.	Exhibits an exceptional understanding and implementation of database ensuring attention to detail, and robust data manipulation procedures and contributing to the overall clarity.
Graphical User Interface	Fails to present or prepare GUI based application interfaces. There is no evidence of creating or integrating such things according to their usefulness.	Limited understanding of graphical user interfaces. Lack of design knowledge. Very poor attempt to make such things which are currently obsolete or can't be identified as coherent.	Shows a basic understanding of creating user interfaces. Most of them are interconnected but maybe some of them lack it. However, most of it can be described as user friendly.	Effectively identifies and meet the consider the simplicity. Design related works are mostly accurate and taken proper attention to ensuring a user-friendly coherent system.	Exhibits an exceptional work design following a high standard of simple and elegant work. Several controls and mechanism has been organized in a preferred way according to the coherent usage .

Chapter 01 (Introduction)

The **G-Shop** system is a C# (.NET Framework, WinForms) desktop application with **Microsoft SQL Server (ProductDB)** as the backend. It streamlines gadget shop operations by centralizing product inventory, category organization, user management, and sales recording, while keeping product and sales data consistent and easy to verify.

What the software does:

- **Authentication & Scoped Access:** Users log in using email and password. The system supports role-based access (e.g., Admin, Salesman) so users only see actions they are permitted to perform.
- **Product Inventory Management:** Admin can add, update, and delete products with category, quantity, and price. Product records remain organized by category for faster searching and listing.
- **Category Management:** Admin maintains the category list (name and description) so products stay structured and consistent across the system.
- **Sales Recording (Invoice-Based):** Salesmen create sales entries with invoice number, product, quantity, unit price, total amount, salesman info, and sales date—so each transaction is traceable.
- **Reporting & Dashboard Overview:** The dashboard provides a quick summary of shop status (total products/users and sales overview) and supports sales reporting/visualization for daily monitoring.
- **Search & Filtering:** Quick search for products (by product name) and users for faster shop operations.
- **Data Integrity:** Uses identity keys for primary records and maintains consistency between product categories and product entries. Business checks are applied (e.g., valid quantities/prices, valid login, and consistent references).

Chapter 02 (User Stories)

As an Admin, I want to **manage master data (Categories, Products, Users), so that the shop records stay accurate and organized.**

- I can create, edit, and delete **categories** with name and description.
- I can add, update, and delete **products** with category, quantity, and price.
- I can create and maintain **user accounts** (Salesman) with email, password, phone, gender, and created date.

As an Admin, I want to **monitor overall shop performance from the dashboard, so that I can quickly understand daily operations.**

- I can view totals such as **total users** and **total products**.
- I can view sales summaries (e.g., sales chart/overview and today's sales snapshot).
- I can refresh the dashboard to see updated values after changes.

As an Admin, I want to **control inventory quality (including low stock visibility), so that stock-outs are reduced.**

- I can list all products and search by product name.
- I can view low-stock items separately to take action early.
- I can update product quantity after restocking.

As a Salesman, I want to **record sales using invoice details, so that every transaction is stored and can be verified later.**

- I can create a sales entry with invoice number, product, quantity, unit price, total amount, and sales date.
- The system stores my salesman ID/name with each sale for accountability.
- I can refresh sales views to confirm the transaction is saved.

As a Salesman, I want to **quickly find products during billing, so that customer checkout is faster.**

- I can search products by name from the product list.
- I can view product category, price, and available stock before confirming quantity.

As a user (Admin/Salesman), I want to manage my profile and password, so that my account remains secure and updated.

- I can update my basic information (as allowed by the system).
- I can change my password by providing the current password and a new password.

Chapter: 03a (ER Diagram):

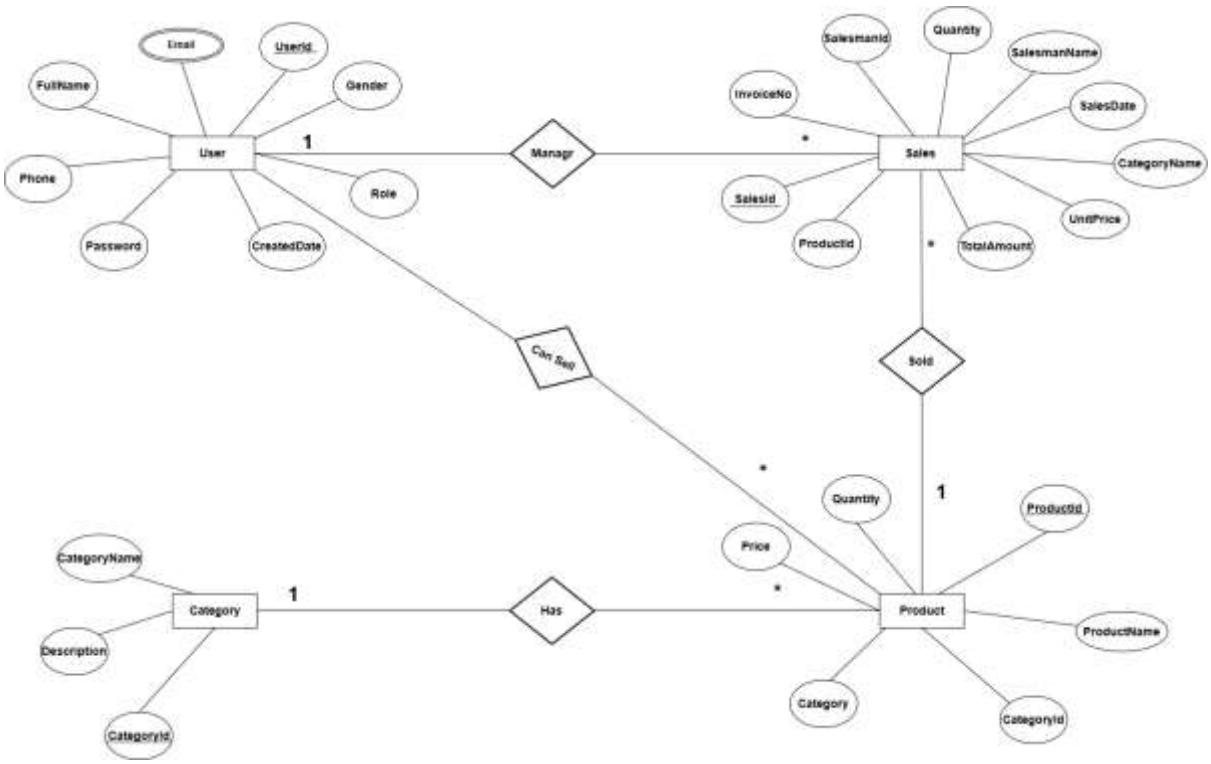

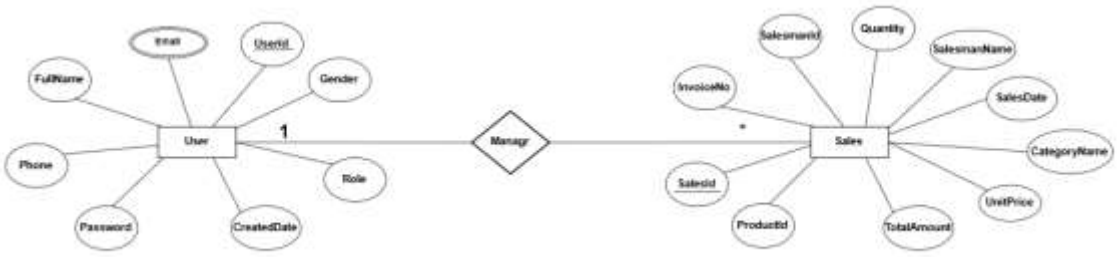

Figure: ER Diagram of **G-Shop** system

Normalization

1. Relation Name: User Handles sales (1-M)

UNF: UserId, FullName, Email, Gender, Role, Password, Phone, CreatedDate, SalesId,

InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount,CategoryName, productId.

1NF: **Multivalued attributes:** Email

1: UserId, FullName, Gender, Role, Password, Phone, CreatedDate.

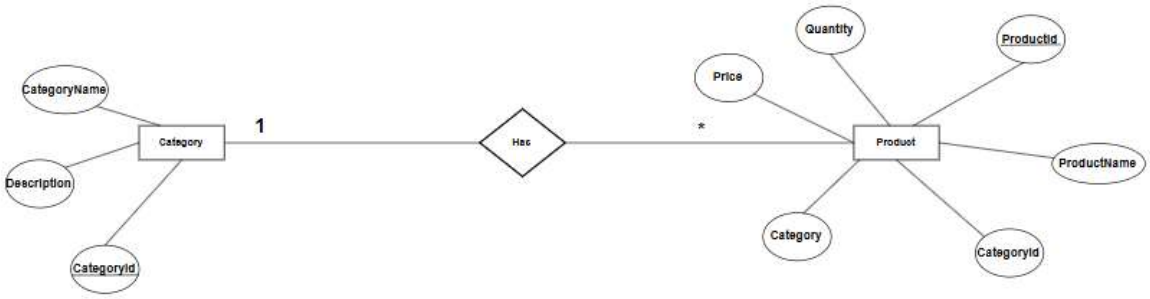

2. SalesId, InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount, CategoryName ,ProductId

2NF:

1: UserId, Email

2: UserId, FullName, Gender, Role, Password, Phone, CreatedDate

3: SalesId, InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount, CategoryName, ProductId,UserId, (FK).

2. Relation Name: Category has Product (1-M)

UNF: CategoryId, CategoryName, Descriptione, ProductId, ProductName, Price, Quantity, Category, CategoryId

1NF:

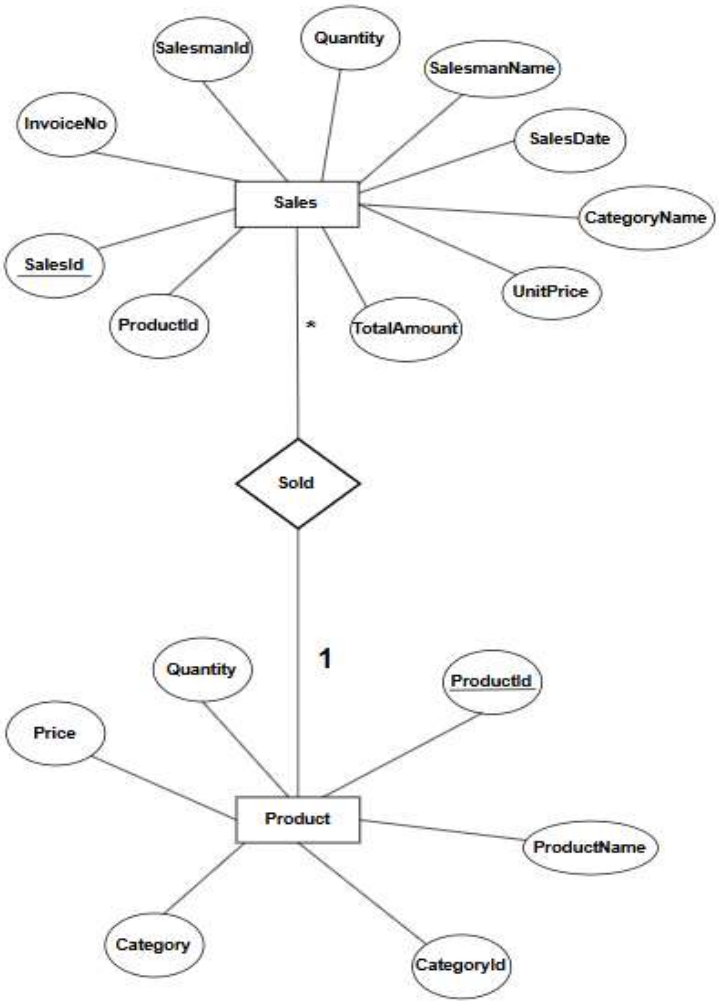

1: CategoryId, CategoryName, Descriptione

2. ProductId, ProductName, Price, Quantity, Category, CategoryId

2NF:

1: CategoryId, CategoryName, Descriptione

2. ProductId, ProductName, Price, Quantity, Category ,CategoryId, (FK)

2. Relation Name: sales sold In Product (1-M)

UNF: SalesId, InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount, ProductId,CategoryName, ProductId, ProductName, Price, Quantity, Category, CategoryId

1NF:

1 SalesId, InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount, ProductId, CategoryName

2. ProductId, ProductName, Price, Quantity, Category, CategoryId

2NF:

1: SalesId, InvoiceNo, SalesmanId, SalesmanName, SalesDate, Quantity, UnitPrice, TotalAmount, ProductId, CategoryName,

2. ProductId, ProductName, Price, Quantity, Category ,CategoryId, SalesId, (FK)
